## ▶ Product Description

**MAHLE** replaces the filter element in the hydraulic system, mainly to filter out the solid particles and colloidal substances in the working medium, reduce the friction between the surfaces of the hydraulic components, improve the reliability of the system, and ensure the reliable and efficient operation of the hydraulic system and the lubrication system. MAHLE replacement filter element is a localized replacement product for foreign imported equipment filter element, which is widely used in petroleum, chemical, metallurgy, aviation, etc. Air, electronics, electro-pharmaceuticals, environmental protection, atomic energy, nuclear industry, natural gas, refractory materials, fire-fighting equipment and other fields.

## ▶ Technical parameters

Filter material: glass fiber , wire mesh	Micron:1-100μm
O-ring: silicone,NBR,Viton	Working temperature:-30°C~+100°C
Operating pressure:21bar-210bar	
Filtration medium:hydraulic oil,lubricating oil,phosphate hydraulic oil,emulsion,water glycol,etc	
Application:metallurgy&steel,thermal power and nuclear power,electronics industry,petrochemical and railway internal combustion engine filtration,etc	

MAHLE replaces the filter element Technical parameters Lefilter

MAHLE replaces the filter element Lefilter

## ▶ Customer Cases

## filtration site

function:oil filtration  
characteristic:high filtering effect

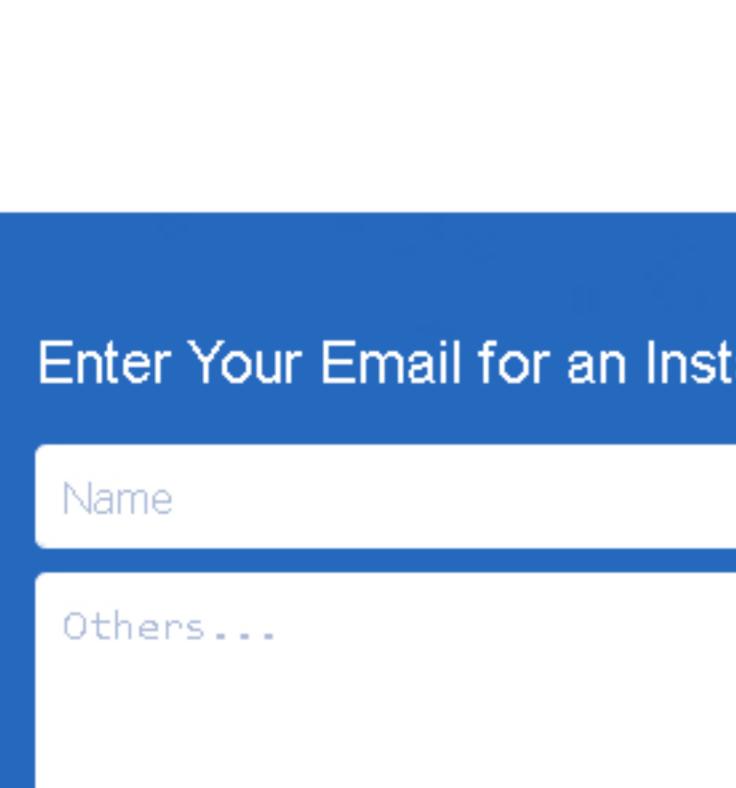

## pressure pipeline filtration site

function:hydraulic oil filtration  
rate of flow:200t/h

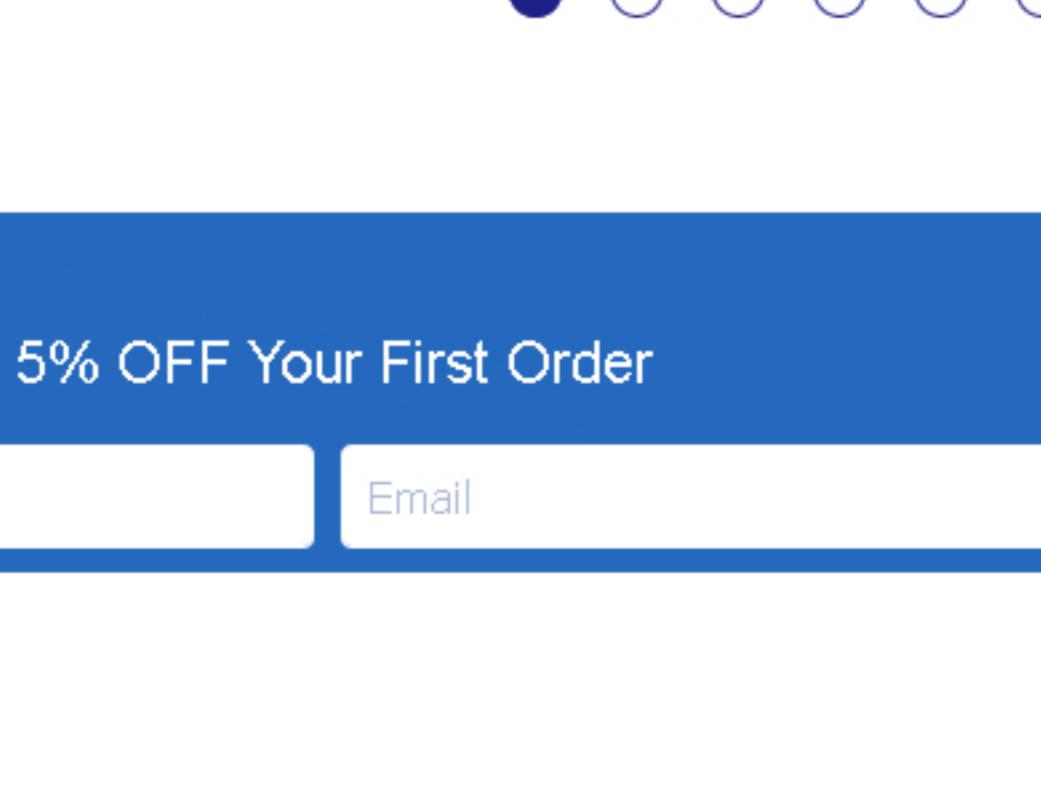

## machining filtration site

function:oil filtration  
rate of flow:100t/h
